

H3C WA6022H New Generation Wall-Plate Access Point

H3C WA6022H Wi-Fi 6 (802.11ax) Wall-Plate Wireless Access Point

Overview

H3C WA6022H is a Wi-Fi 6 (802.11ax) wall-plate access point (AP) individually developed by New H3C Technologies Co., Ltd. (H3C). It can be widely applied to scenarios such as enterprises, schools, and healthcare.

The AP adopts a dual-band and four-stream design with a maximum access rate of 1500Mbps. For 5 GHz radio 2 spatial streams, the maximum negotiation rate is 1200Mbps. For 2.4 GHz radio 2 spatial streams, the maximum negotiation rate is 300Mbps.

The AP features flexible installation methods, including 86×86mm panel mounting, wall mounting, and ceiling mounting.

WA6022H Wi-Fi 6 (802.11ax) wireless access point

Product features

Install AP in 3 to 5 minutes, 5 steps only

Wall-Mount series AP uses the international standard wall plate design. Installing an AP is just as simple as installing other switching panels. All it takes is 5 steps in less than 5 minutes which effectively accelerates the wireless network deployment process.

Operating mode

The built-in all-in-one version of the WA6022H AP enables the switching of operating mode as required, to save the implementation costs and is usable upon unpacking.

Fit AP mode

The WA6022H supports the Fit AP mode and can be managed by the wireless controller equipped with the Comware system. In this networking mode, the user can locally manage the APs in batches.

Cloud AP mode

WA6022H supports H3C Cloudnet solution that enables wireless networking without hardware AC and authentication server. It can perform authentications via PSK, Portal, SMS, and WeChat. Customized development is implemented for multi-branch scenarios such as hotel chains and supermarkets, enabling features such as easy deployment, hierarchical and decentralized management, smart large screen at headquarters, and customized configuration templates. The Cloudnet smart O&M platform enables users to grasp the status of wireless devices, networks, and terminal devices, and allows for simple management and O&M. This helps to reduce customer capital investment and O&M labor costs, and increase efficiency.

WA6022H supports Quicknet local automatic networking solution. Automatic discovery and construction of devices to achieve unified management of multiple devices and ensure network experience by relying on AP intelligent native technology

Smart O&M

The visualized, measurable, and auto-optimized H3C smart O&M system facilitates operation and maintenance and saves labor costs.

Data visualization

The H3C smart O&M system collects and displays rich O&M data via telemetry techniques. On the terminal side, it records the terminal's roaming log, authentication log, signal strength, important packet interaction log, packet loss, latency, etc., and can identify over 150 reasons for terminal failures to go online, over 140 reasons for terminals to go offline, and over 100 reasons for authentication failures. On the AP side, it collects data such as AP association failures, reasons for detaching from the AC, traffic composition of each wired interface, error packet information, radio traffic composition, radio channel utilization, radio interference strength, and WIPS wireless attacks.

Measurability

The H3C smart O&M system has established a perfect evaluation system to measure the user experience, device health status, and network status, enabling the administrators to view and maintain the network easily.

Security protection of wired and wireless networks

Terminal device access and admission security

With the wireless controller, wireless switches, and authentication system self-developed by H3C, WA6022H can support authentication and encryption via 802.1x, PSK, MAC address, and Portal. This ensures network security.

Wireless intrusion prevention system (WIPS)

WA6022H supports WIPS. In combination with the wireless controller/wireless switch, it supports WIPS features such as detection, intrusion detection, as well as blacklist and whitelist of rogue devices at the same time. The WIPS features enable the device to detect, identify, take countermeasures against, and effectively intercept rogue devices.

Wired network security

WA6022H supports wired access and control of APs. The wireless port of APs can be authenticated as an 802.1X client of the wired access network to ensure the legality of the AP. It guarantees the security of the wireless tunnel through encryption methods such as CAPWAP tunnel and DTLS.

Radio resource management (RRM)

RRM monitors in real time the environmental conditions such as the utilization rate of radio channels, channel interference, and signal conflict through systematic intelligent radio management. Moreover, it adjusts in real time the radio parameters such as the working channel, bandwidth, and power to maintain optimal radio resource status. In this way, it enables auto network planning and auto network repair.

Roaming optimization

The wireless AP supports the fast BSS transition feature defined in the 802.11r standard that helps to facilitate the roaming of wireless users, reduce the possibility of network interruptions, and enhance roaming quality.

Through the 802.11k mechanism, the AP and the wireless client perform interactive detection and perceive multi-dimensional network topologies. The AC identifies and comprehensively calculates the roaming timing and access location of the wireless client from a full perspective and negotiates switching with the client via the 802.11v and 802.11r mechanisms. During the switching period, the AC will ensure the traffic of the downlink service, to achieve seamless switching and improve user experience.

Only 11ax access

WA6022H supports the only 11ax access feature. The Wi-Fi 6 (802.11ax) is backward-compatible with 802.11a/b/g/n/ac standard, so the users of the 802.11a/b/g/n/ac standard can access a Wi-Fi 6 (802.11ax) wireless access device. However, its compatibility causes a decline in the actual performance of devices with high access capabilities such as Wi-Fi 6 (802.11ax) to some extent. The H3C devices enable the user to set the access mode of a certain radio frequency to only 11ax (only users using Wi-Fi 6 (802.11ax) can access). This ensures bandwidth transmission and device performance.

Orthogonal frequency division multiple access (OFDMA)

WA6022H supports OFDMA technology. An AP can divide wireless bandwidth and transmit data to multiple terminals simultaneously via different subcarriers. This reduces transmission latency caused by multi-user radio resource contention and backoffs and improves the user experience of low-latency applications such

as speech output and video in multi-user scenarios.

Spatial reuse (SR)

WA6022H supports spatial reuse technology and basic service set (BSS) coloring technology. With these technologies, it identifies the color of the packets at the link layer to control the terminal device and adjusts transmit power to improve the reuse rate of channels in high-density deployment and avoid co-channel interference in case of simultaneous multi-user operation. This greatly improves the utilization rate of spectrum resources.

Orthogonal frequency division multiple access (TWT)

WA6022H supports the target wake times (TWT) technology. It allows the AP to uniformly schedule the wake-up and sleep time of the terminal, reducing contention and improving power efficiency by decreasing unnecessary wake-up times of the terminal.

Flexible forwarding

When the WA6022H AP is connected via a wide area network (WAN), the wireless access points (AP) are deployed in branch offices, while wireless access controllers (AC) are deployed in headquarters. In the traditional forwarding mode, all packets are sent from APs to ACs, and centrally forwarded by the AC. However, for WA6022H, the packets can be converted to wired packets on the wireless access device directly avoiding data packets sent through AC but forwarded locally, which significantly saves wired network bandwidth. Besides, WA6022H supports flexible policy-based forwarding and allows terminal devices of the same wireless service to implement centralized forwarding and local forwarding, so as to release export bandwidth and save costs of network bandwidth.

IPv4 and IPv6 dual stack (Native IPv6)

WA6022H is fully compliant with IPv6 and implements dual IPv4/IPv6 protocol stacks. It can automatically register on the wireless controller and provide wireless services no matter in an IPv4 or IPv6 network via broadcast, multicast, DHCP option 43, or DNS, so that it never runs as an information silo.

certification	FCC Part 15, EN 300 328, EN 301 893, and MIIT SRRC	
MTBF	2230121H	

Software specifications

Name		WA6022H	
Positioning		Indoor wall-plate AP (5 GHz 2*2 MIMO + 2.4 GHz 2*2	
		MIMO)	
	Fit mode	Controlled by AC	
Operating	Cloud mode (Fat	Controlled via Cloudnet or operates independently	
mode	mode)	Controlled via Cloudilet of operates independently	
mode	Mode switching	Mode switching via command lines, ACs, Cloudnet, or reset	
	Mode switching	button	
	Maximum Wi-Fi 6	1500Mbps	
	(802.11ax) transmission	(1200Mbps + 300Mbps)	
11ax	speed	(1200Mbps + 300Mbps)	
	TWT	Supported	
supported	BSS Color	Supported	
	OFDMA	Supported	
	Only 11ax	Supported	
	Working frequencies	5 GHz + 2.4 GHz	
	A-MPDU	Supported	
	A-MSDU	Supported	
WLAN basics	Maximum likelihood	Commented	
	demodulation (MLD)	Supported	
	Maximal ratio	Cupported	
	combining (MRC)	Supported	

	Spatial-Time block	Cupported
	coding (STBC)	Supported
	Low-density parity	Supported
	check (LDPC)	Supported
	Recommended	100
	number of clients	100
	Maximum number of	8
	SSID	0
	STA related	STA offline anomaly check, STA aging, statistics and status query
	User number limit	Supported
	Link integrity check	Supported
	Broadcast probe	
	acknowledgment	Supported
	control	
WLAN	Prohibition of client	
extended	access with weak	Supported
	signals	
	Hidden SSID	Supported
	WLAN RRM	Supported
	Wireless bridging	Supported
	11k	Supported
	11v	Supported
	11r	Available in Fit mode
		TKIP, CCMP, WPA3
	Encryption	Multiple encryption key triggered dynamic unicast/multicast
		key update
	802.11i	Supported
		802.1X authentication, MAC address authentication, PSK
Security		authentication, Portal authentication;
control	Authentication	Open system/shared key authentication;
policies		Enhanced open system authentication
		Mixed access of WPA, WPA2, WPA3, and Pre-RSNA users
	User isolation	Layer 2 user isolation
	OSCI ISOIGHOIT	SSID-based user isolation
	Forwarding security	Packet filtering, MAC address filtering, and broadcast storm
		suppression

	SSID and VLAN		
	binding	Supported	
	WIDS/WIPS	Supported	
	MFP (802.11w)	Supported	
	802.1X Client	Supported	
	Radius Client	Supported	
	Multiple-domain	Supported	
AAA	authentication server	Supported	
	Backup authentication server	Supported	
	IP address		
	configuration	Static IP or DHCP assigned IP (option 60)	
	Native IPv6	Supported	
	IPv6 Portal	Supported	
Layer 2 and	IPv6 SAVI	Supported	
layer 3	ACL	IPv4/IPv6	
features	NAT	Available in Cloud mode	
	PPPoE Client	Available in Cloud mode	
	Local forwarding	Local forwarding based on SSID+VLAN supported in Fit mode	
	802.11e	WMM	
		Ethernet port based 802.1p identification and marking	
	Priority	priority	
		Priority mapping for wired and wireless connection	
	Strategic QoS mapping	Distinctive QoS policies based on individual SSID/VLAN	
	Layer 2 to Layer 4		
	packet filtering and	Supported	
	traffic classification		
QoS	CAR	Supported	
		Bandwidth allocation per STA	
	User bandwidth	All STAs sharing bandwidth with a common SSID	
	management	Dynamical adjusting of the available bandwidth of the STAs	
		in terms of service needs	
		Traffic-based load balancing	
	Load balancing	User-based load balancing	
		Radio-based load balancing for dual-5G devices	
	Spectrum guide	Supported	

	CAC (Call Admission		
	Control)	Session-based and channel usage-based CAC	
	Application	Supports audio and video optimization (SQA/UCC) in Fit	
	recognition	mode	
	Airtime fairness (ATF)	Supported	
	Green AP mode	Supported	
	Dynamic MIMO power	Supported	
Green	saving	Supported	
features	Enhanced automatic		
leatules	power save delivery (E-	Supported	
	APSD)		
	SM Power Save	Supported	
	Centralized AC	Fit mode: supports centralized management	
	management	Cloud mode: supports version upgrade and mode switching	
Managara	Cloudnet management	Available in Cloud mode	
Management and maintenance	Local Web	Available in Cloud mode	
	Telnet	Available in Cloud mode	
	SSH	Available in Cloud mode	
	Debug serial port	Supported	
	Smart O&M	Available in Fit/Cloud mode	

Ordering Information:

Product ID	Product Description	
EWP-WA6022H	H3C WA6022H Internal Antennas 4 Streams Dual Radio 802.11ax/ac/n	
	Walljack Access Point	
EWPAM1HPOE-GL	EWPAM1HPOE 55V/30W Single port POE Injector,Overseas Version	
ADP040-54V-PoE-GL	H3C 54V 40W High Power Adapter Power Supply (including PoE	
	Injector)
